DESCRIPTION OF TECHNICAL INNOVATION(S) - Please Print

Dr. Zoran M. PELAGIC, by profession a software engineer for computer simulations, devoted his life to Space Models from an early age. After taking a break as competitor from 2011, as International Judge and Space Subcommittee member he worked and developed several program tools, which were, and still are widely used to judge Space Scale models at Category one and two events.

Beside programs, he actively led in 2016-2019 the scale working group and developed templates for Scale model data and judging logistics which considerably improved the quality of judging, saving time at competitions.

List of innovations:

- Led several working groups and developed easy-to-use program tools for scale judging/ results processing for competitions,
- Set standards to scale data packs and created template for usage,
- Improved competition logistics at Spacemodelling competitions by introducing online registrations, thus lowering paperwork to competitors and judges,
- Automated the process of creation of Scale judging protocols,
- Contributed to the creation of scoring standards.

Outside this, he is the author of many articles, mostly concentrated for Scale models and model rocket techniques in general.....
